# Voyager Global Sourcing Management

**Voyager Global Sourcing Management™ gives you the freedom to cost-effectively source and manufacture anywhere in the world to gain a competitive advantage, without compromising quality or product availability.**

Companies are increasingly relying on third-party partners around the world for materials, manufacturing and logistics services to help them reduce time-to-market, and cost effectively gain a competitive advantage.

However, keeping up with this extensive supply network presents major challenges. Many companies lack standardized procedures or the communication and IT infrastructure to support their global sourcing strategies.

### Improve Margins

Voyager Global Sourcing Management™ gives Brand Owners—such as retailers and manufacturers of private label and branded merchandise—the ability to reduce total supply chain costs, optimize sourcing decisions, extend visibility into offshore production, monitor the movement of goods, and improve the flow of information with supply-side trading partners.

Voyager Global Sourcing Management streamlines and automates the entire strategic sourcing process—from quote management and product specification package delivery; bid analysis and supplier performance management; production management and quality monitoring; packaging through carton labeling; and finally supplier shipment tracking and advanced shipment notification. By capturing valuable supply chain information in a central repository, you have the freedom to source and manufacture anywhere in the world without compromising quality or availability.

### Reduce Time-to-market

With Voyager Global Sourcing Management, you reduce the time needed to identify and qualify the best suppliers based on criteria that are important to your business—which allows you to speed your time-to-market. Using supplier scorecards assists in selecting new suppliers and encourages existing partners to continuously improve their production capabilities.

In days rather than weeks, you can engage dozens of suppliers from around the globe in your initial evaluation.

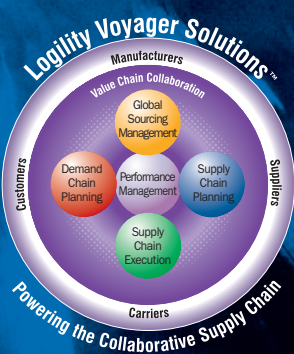

*Voyager Global Sourcing Management streamlines and automates the entire strategic sourcing process—from quote management and product specification package delivery, to bid analysis and supplier performance management, through production management, quality monitoring, packaging and carton labeling, supplier shipment tracking and ASNs. With Logility you can:*

- Gain a competitive advantage by reducing the total cost of materials, manufacturing services, lost sales, shipping errors, lead times and shipment costs
- Achieve the best mix of suppliers at the lowest possible cost
- Gain visibility and control across your global value chain including manufacturer performance and supplier shipment tracking
- Collaborate with offshore partners via the Internet to reduce cycle time, document requirements and hold suppliers accountable
- Track orders throughout the value chain from suppliers to manufacturing to the end customer
- Reduce product variability and ensure quality standards

The solution creates RFPs/RFQs, and helps you compare and analyze bids. Then you can formalize your organization's design, quality, schedule and budget requirements with selected partners to clearly communicate product specifications and updates.

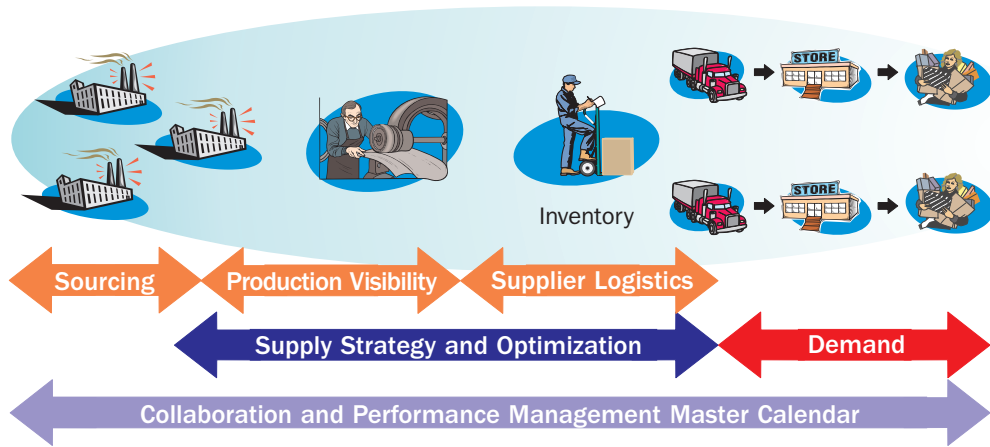

### Reduce Supply Risk and Total Cost

By implementing a collaborative calendar and automated, exception-driven monitoring, you can ensure you receive the real-time information you need to stay informed, while freeing you up to focus more on strategic issues. You have better visibility into fact-based performance analysis, production status and supplier logistics, that let you capture the full benefits of global partnerships.

# About Logility

Logility is a leading provider of collaborative solutions to optimize the supply chain. Logility Voyager Solutions™ enable networks of trading partners, including suppliers, manufacturers, distributors and retailers to collaborate, integrate and synchronize their planning, sourcing, production, warehouse and transportation operations.

*Increase your visibility with global partners to optimize sourcing, rate supplier performance, gain production visibility and track supplier logistics.*

**Voyager Global Sourcing Management** gives you the freedom to cost-effectively source and manufacture anywhere in the world to gain a competitive advantage, without compromising quality or availability.

**Optimized sourcing practices.** Voyager Global Sourcing Management's strong workflow capabilities help brand owners organize, schedule and monitor key activities throughout a product's life cycle—from proposal management to product delivery. The solution allows you to develop and implement sourcing strategies specific to each supplier or purchase order.

**Supplier relationship management.** Vendor scorecards track supplier performance, quality ratings and accurate reporting of manufactured and delivered goods to more effectively source and manage supply chain needs.

**Global sourcing.** Enables you to manage each sourcing initiative, including product development, specifications, requests for quotes and bids, purchase order generation and pre-production tracking. Organize and monitor time and action calendars.

**Increased production visibility.** Help ensure production sites provide timely and accurate information. Gain greater visibility to factory-based work-in-process, production milestone and quality reporting, packing and carton labels.

**Streamlined supplier logistics.** Gain greater visibility to shipment documentation such as ASNs, BOL, commercial invoices, shipping manifests. Enable supplier shipment tracking to understand the current status of important shipments. Generate accurate shipping labels to track and trace global orders dynamically across the entire value chain.

**Value Chain Designer™.** Provides visibility into supply chain networks to analyze capital expenditure plans, assess risk strategies and optimize global network operations to clearly evaluate manufacturing, distribution and strategic sourcing options.

**Supply planning.** Balances supply, manufacturing and distribution constraints to optimize complex sourcing and production decisions based on your corporate profit maximization or cost minimization goals.

**Performance-driven collaboration.** Collaborative calendars define rules and responsibilities in a workflow. Automatic alerts, monitors and reports help you select and award the best suppliers, manage the relationship with these suppliers and monitor performance. So you can spend less time on tactical details and more time on strategic sourcing issues.

**Centralized database.** You can tap into a central database of specifications (e.g., SKU, style, factory, user, etc.) that is delivered to partners via the Internet. Search factory profiles to locate the best suppliers, create formal RFPs/RFQs, and compare and analyze bids.

**Flexible deployment via the Internet.** Voyager Global Sourcing Management is 100% Internet-deployed. The browser-based user interface reduces technology barriers to streamline trading partner participation. This is especially helpful when dealing with partners in multiple time zones with minimal technology infrastructure. The solution works with existing Logility and third-party solutions, and can also be implemented as a standalone solution.
